

## Ordering a Custom Unit

Many products from Jupiter Avionics Corporation (JAC) can be ordered and built to suit your requirements – not just internal settings, but also front panel legends (where appropriate). Jupiter's unique ProCS™ software is used to specify and order customized units simply and efficiently.

Refer to Section 2 of the online ProCS™ manual for software installation information, and Section 3 for a full description of the ProCS™ functionality.

### 1 Downloading and Launching the Software

After downloading the ProCS™ software from the JAC website ([www.jupiteravionics.com](http://www.jupiteravionics.com)) and installing it on a PC or laptop, launch the software by either checking the 'Launch ProCS' checkbox on the 'Completing the ProCS setup Wizard' window, by double clicking the ProCS™ icon on the desktop if that option was selected, or by opening it from the folder where it was saved during installation. Refer to Sections 2 and 3 of the ProCS™ manual when necessary.

### 2 Specifying the Legends and Product Configuration

1. Select the required device from the 'Products' list.
2. Click on the product name to display the device in the Editing Window.
3. Double click the name or click on the arrow to the left of the name to open a 'tree view' of customizable features.
4. When all the required specifications have been entered, click on the 'Save' icon .
5. The 'Save File' window will open (see ProCS™ manual section 3.3.6).
6. In the 'Save File' window, choose a file name for this configuration. Click 'Save' and all the data will be saved as a ProCS Data File (.pcs).
7. Email your order and the .pcs file to JAC ([sales@jupiteravionics.com](mailto:sales@jupiteravionics.com)). The .pcs file will then be used to build a fully customized device, with all front panel legends (where appropriate) and all levels and settings factory-set to meet your requirements.
8. Ensure that your order to JAC\* is cross-referenced to the correct .pcs file.
